

Name : Minal Shamrao Chhatre

std : 3rd year (G3)

BATCH : (A)

enroll: 1906016

JAVA PRACTICAL : 1

Practical 1:

1. Write a program to print the Fibonacci series upto 50 using for loop

code:

```
public class Fibonacci {  
  
    public static void main(String[] args) {  
        // TODO code application logic here  
        int n1=0,n2=1,n3,i,count=11;  
        System.out.println(n1+" "+n2);//printing 0 and 1  
        for(i=2;i<count;i++)  
        {  
            n3=n1+n2;  
            System.out.println(" "+n3);  
            n1=n2;  
            n2=n3;  
        }  
    }  
}
```

output-

Windows PowerShell

8
13
21
34
55
PS D:\java>
```

2. Write a program to print even series upto 20 using while loop

CODE:

```
public class WhileEven {

    public static void main(String[] args) {
        // TODO code application logic here
        int i = 1;
        System.out.println("Even Numbers : ");
        while(i<=20)
        {
            if(i%2==0){
                System.out.println(i+" ");
            }
            i++;
        }
    }
}
```

```
}
```

output:

```
PS D:\java> javac WhileEven.java
```

```
PS D:\java> java WhileEven
```

```
Even Numbers :
```

```
2
```

```
4
```

```
6
```

```
8
```

```
10
```

```
12
```

```
14
```

```
16
```

```
18
```

```
20
```

=====

3. Write a program to print the sum of hardcoded digit's in number using do while loop.

ex(127=1+2+7=10)

code:

```
public class SumOfDigits {
```

```
    public static void main(String[] args) {
```

```
        // TODO code application logic here
```

```
        int num = 256;
```

```
        int rem = 0;
```

```
        int sum = 0;
```

```
        int x = num;
```

```
        System.out.println(num + "=");
```

```
        while(x>0){
```

```
            rem = x % 10;
```

```
            sum = sum + rem;
```

```
            x = x / 10;
```

```

        System.out.println(rem + "+");
    }
    System.out.println("=" + sum);
}

}

```

output:

```

PS D:\java> javac SumOfDigits.java
PS D:\java> java SumOfDigits
256=
6+
5+
2+
=13
PS D:\java>

```

4. Write a program to print whether the given number is prime or not using if-else

code:

```

public class Isprime {
    public static void main(String args[]) {
        int i, m=0, flag=0;
        int n=3; // it is the number to be checked
        m=n/2;
        if(n==0 || n==1) {
            System.out.println(n+" is not prime number");
        } else {
            for(i=2; i<=m; i++) {
                if(n%i==0) {
                    System.out.println(n+" is not prime number");
                    flag=1;
                    break;
                }
            }
        }
    }
}

```

```

    }
    if(flag==0) { System.out.println(n+" is prime number"); }
} //end of else
}
}

```

output:

PS D:\java> javac Isprime.java

PS D:\java> java Isprime

3 is prime number

PS D:\java>

=====

5. Write a program using break, continue and switch statement.

code:

```

import java.util.Scanner;
public class Switchcase {

```

```

    public static void main(String[] args) {
        // TODO code application logic here
        System.out.println("press 1 for continue statement or press
        2 for break statement");

```

```

        Scanner sc = new Scanner(System.in);

```

```

        int user = sc.nextInt();

```

```

        int num = user;

```

```

        switch(num) {

```

```

            case 1:

```

```

                for (int i = 0; i < 10; i++) {

```

```

                    // If the number is 2

```

```

                    // skip and continue

```

```

                    if (i == 2)

```

```

        continue;

        System.out.print(i + " ");
    }
    break;
    case 2:

        // Initially loop is set to run from 0-9

        for (int i = 0; i < 10; i++) {

            // Terminate the loop when i is 5

            if (i == 5)

                break;

            System.out.println("i: " + i);

        }

        System.out.println("Out of Loop");

        break;
    default :
        System.out.println("Invalid Option");
    }
}
}

```

output:

PS D:\java> javac Switchcase.java

PS D:\java> java Switchcase

press 1 for continue statement or press 2 for break statement

The background application is a web browser showing a search bar with the text "Find and Replace" and a "Go Premium" button. The taskbar at the bottom shows various icons including the Start button, File Explorer, Edge, and several other applications. The system clock in the bottom right corner indicates the time is 2:03 AM on 9/29/2021.
